

## TGEV PCR RESULTS OVER TIME AT MINNESOTA VDL

During 2013-2014 we tested many more samples for TGEV because we were using a test that combined PEDV and TGEV so every time PEDV was requested TGEV PCR was also run. That is not the case anymore.

The figure below shows only the positives with a more appropriate scale. Only a few positives so far this winter. Less positives last winter than in previous 4 winters.
